Introduction

The stock market is not a random market place that can not be understood, I believe it is very much ordered and operating according to universal mathematical laws, laws that govern movements and formation of atoms and even our cells. These laws also govern the movement and forces at work in the solar system, galaxy and the universe. The good news is that you do not need to understand all the equations and background in order to make great profits with them, just as you do not need to know the intricacies of how a car engine works in order to drive a car.

Whilst stocks and shares can be traded safely, not knowing what you are doing can cause you to loose your hard earned money quicker than you can ever earn it. I have seen portfolios wiped out in a matter of weeks, because of lack of precautionary measures and correct asset allocation.

In this book I will tell you all you need to know to trade stocks and shares and make high two and three figure profits annually. This is unbelievable to most as you will never have heard of anyone making regular and consistent three figure profits in anything. Don't be surprised, after you have read this book you will doubt no more. This book is heavy on details so I suggest you use a highlighter pen or pencil to mark the points of interest to you.
